

Fuel Proofing

You can fuel proof any area of your model using Flecto Varathane "Diamond Finish". It comes in spray cans in satin, semi-gloss, and high gloss. So you can paint with a non-fuel proof paint and over spray it with this. It is clear when dry. Available at Lowes and HQ.

Cleaning fluids

Many cleaning fluids are corrosive. Most of them contain mostly water. Don't be so generous when spraying them all over your airplane. If the fluid gets inside the switches trouble could ensue. Try alcohol (not the drinking kind) and a cleaner. It is friendly to Monokote, metal, etc.

Overcoat

If you find you have painted your model with a non-fuel-proof finish spray over the finish with Flecto Varathane "Diamond Finish". It comes in satin, Semi-gloss and high-gloss and is fuel proof.
